

STATEMENT OF COMMITMENT TO CARBON NEUTRALITY

In line with our Sustainability Policy in regards with environmental care, the Organization is committed to contribute with actions in its daily operation to mitigate the effects of Climate Change and **contribute to the country's goals and the initiatives of the Industry of Fairs and Events with the final purpose of reducing in 50% Greenhouse Gases (GHG) by 2030 and continue with emissions reduction actions by 2050.**

Due to this, the Organization has set an Emissions Reduction Plan that is inspected and updated yearly to monitor our emissions and focus mainly on the principal sources identified to generate the most GHG through calculation exercises related to Waste Management programs focusing on a Zero Waste approach and using water and energy in an efficient way. This is followed by actions that will reduce materials and fuels, in addition to those that will compensate, through projects that guarantee the regulatory and technical compliance required to achieve these goals; as well as the promotion of the best practices that can be adopted by the sector and our interest groups in the different scenarios of fairs and events.

Consequently, the actions that we take to calculate, reduce and compensate our GHG emissions, **will be submitted to an endorsed third party, with the purpose of guaranteeing the transparency principles that our Organization have adopted.**
